

**\*\*1. Explain Environment and write the significance of Environment Management\*\***

Environment is the sum of all living and non-living surroundings that sustain life, and its management ensures sustainable use of resources for future generations.

**\*\*2. Write short note on Global Warming as a Global Environmental Concern.\*\***

Global warming is the rise in Earth's average temperature due to increased greenhouse gases like CO<sub>2</sub>, causing climate change worldwide.

**\*\*3. Discuss on Applications of Environmental Management System.\*\***

EMS is applied in industries, waste management, pollution control, resource conservation, and policy-making to minimize environmental impact.

**\*\*4. Discuss the Atomic and Biomedical hazards as related to Global environmental concern\*\***

Atomic hazards arise from radioactive material exposure (e.g., nuclear accidents), while biomedical hazards come from improper disposal of medical waste like syringes and infected materials.

**\*\*5. Discuss on environmental issues related to Indian context\*\***

India faces issues like air/water pollution, deforestation, soil erosion, and waste management challenges due to rapid industrialization and population growth.

**\*\*6. Explain Acid Rain\*\***

Acid rain is precipitation with high acidity caused by sulfur dioxide and nitrogen oxide emissions reacting with atmospheric moisture.

**\*\*7. Summarize the reasons for Loss of Biodiversity\*\***

Habitat destruction, pollution, climate change, overexploitation, and invasive species are key causes of biodiversity loss.

## **\*\*8. Discuss the Food Chain related to Ecosystem\*\***

A food chain is the sequence of energy transfer from producers to various levels of consumers within an ecosystem.

## **\*\*9. Describe Ecosystem and its types\*\***

An ecosystem is a community of living organisms interacting with their physical environment, classified into terrestrial (forest, desert) and aquatic (freshwater, marine) types.

## **\*\*10. Explain Sustainable Development\*\***

Sustainable development means meeting present needs without compromising the ability of future generations to meet their own needs.

## **\*\*11. Explain Ozone Layer Depletion\*\***

Ozone depletion is the thinning of the stratospheric ozone layer mainly due to chlorofluorocarbons (CFCs), increasing harmful UV radiation on Earth.

## **\*\*12. Explain the meaning of industrial or Man-made disasters with suitable examples.\*\***

Man-made disasters are human-caused catastrophic events like industrial accidents (Bhopal gas tragedy) and oil spills, resulting from negligence or technological failure.

## **\*\*13. Discuss Major Environmental Problems in India and their implications for public health and natural resources.\*\***

Air pollution, water scarcity, deforestation, and waste mismanagement severely affect public health and deplete natural resources in India.

## **\*\*14. Describe the current Energy Scenario in India. What challenges does India face in meeting its energy demands?\*\***

India relies heavily on fossil fuels for energy, facing challenges like rising demand, resource depletion, and the need for renewable energy transition.

**\*\*15. Explain Present Energy Scenario in India\*\***

India's energy mix is dominated by coal, with growing emphasis on renewable sources like solar and wind to meet increasing demand sustainably.

**\*\*16. Discuss various Environmental Issues in the Consumption of Conventional Energy Resources\*\***

Burning fossil fuels causes air pollution, greenhouse gas emissions, and depletion of non-renewable resources.

**\*\*17. Discuss various Solutions to the Energy Problems in India\*\***

Promoting renewable energy, improving energy efficiency, and reducing dependency on fossil fuels are key solutions.

**\*\*18. What are different Types of Radioactive Hazardous Wastes\*\***

These include low-level, intermediate-level, and high-level radioactive wastes based on their radioactivity and handling requirements.

**\*\*19. Discuss methods to control Hazardous Waste\*\***

Waste minimization, proper treatment, secure landfilling, and recycling are effective methods to control hazardous waste.

**\*\*20. Define and explain "Endangered Life-Species" with suitable examples\*\***

Endangered species are organisms at high risk of extinction due to habitat loss or human activity, such as the Bengal tiger and Asiatic lion.

**\*\*21. What are Remedial Measures for Conservation of Biodiversity?\*\***

Establishing protected areas, enforcing anti-poaching laws, promoting afforestation, and running captive breeding programs help conserve biodiversity.
